

We propose the use of the Mt.Fuji Toilet

(Japanaese Name [Ho!Toilet])

which is portable eco-toilets using chemical tablets to decompose body wastes. It doesn't require any water and electricity.

Chemical tablets

The chemical tablet which can decompose the wastes is our innovative product.

The tablets consists of lime which disinfect the wastes and remove odor. The remaining, after the wastes dealt with the tablet, can return to soil. Besides, the remaining can be used as water retention material for greening desert.

How they
are used

①As good for protection in emergency case after disaster

For that purpose, many private companies and governmental organizations introduced the chemical tablets (Japan Self-Defense Forces, Ministry Offices, Mitsubishi Tokyo UFJ Bank, Mitsui Sumitomo Bank, Tokyo Electric Power Company, NTT group, Tokyo gas, and other private companies and schools)

②For portable toilets used in areas where there is no infrastructure.

The tablets were used in Mt. Fuji for free based on the agreement with Yamanashi prefecture.

③For dealing with the body wastes contaminated with viruses or germs causing communicable diseases

It is proved that the chemical can disinfect colon bacillus and Staphylococcus aureus.

How to use

Portable toilet
It can be used as the portable toilet with the attached materials (see the pictures) even where there is no formal toilet facility.

"Mt.Fuji Toilet" kit includes the following items: Chemical tablets, Toilet Paper, Black Plastic Bag, Paper Box (can be used as a toilet bowl), Black Plastic Poncho

In the panel shaelter

The panel shelter and toilet pots can be used as formal toilet without water and electricity.

*We also plan to develop the panel toilet which can be used without plastic sheet.
